For iOS Users

For our treasured iOS users, we are thrilled to share that SIMBA is working with Apple to carry out network verification tests for their iOS 5G Standalone (SA) carrier configuration. Concurrently, SIMBA has also requested 5G Non-Standalone (NSA) to remain available for you until the above is completed. To ensure continuous, uninterrupted 5G connectivity for our iPhone users while network verification tests and final carrier configuration updates are pending with Apple, SIMBA has asked the Infocomm Media Development Authority (IMDA) for an extension of 5G NSA support. We are currently awaiting feedback from IMDA and will update customers as soon as official guidance is available. Rest assured, all SIMBA mobile services—including 4G and existing 5G connections—remain fully active, optimized, and unaffected throughout this transition.
